

iGATE Server

What is iGATE server solution?

Our iGATE server solution connects your internal network to the external Internet. It allows multiple computers in your organization to share a single Internet connection efficiently.

It takes care of all the issues related to Internet connection, automatically and transparently. It dials and connects to your ISP as and when required automatically (in case you have a dial up connection). It also disconnects from the ISP when connection is no longer required.

It improves the security and safety of your web access by allowing you to block specific sites and services. Optionally, you can also choose real time virus scanning of downloaded web pages and files. It forms a shield between your users and the "wild" Internet.

What you gain with our iGATE Server solution ?

- Share one Internet connection among several users simultaneously
- Save telephone bills / connection time / bandwidth
- Faster and more efficient surfing / browsing
- Safety: Automatic virus scanning of downloaded files and web content (Optional)
- Block sites with objectionable content

Very low total cost of ownership

- ➔ Avoid the excruciating cost of per user/seat/client licensing trap – now and in the future.
- ➔ Bid goodbye to frequent and expensive downtimes due to system crashes and virus attacks.
- ➔ Get out of the "mandatory" hardware upgrade cycle.
- ➔ No additional training required for the end-users. If they know windows they can use our system from day one.
- ➔ Highly resistant to virus infections, hence very very low downtime due to viral attacks.
- ➔ With auto-configuration you do not need to individually configure each computer on the LAN.

Backed by our responsive support delivered via email, telephone, on-site or remote administration service plans.

Features

Internet Connection features

- Supports most of the Internet connection methods like normal dial up, ISDN, leased line, DSL/ADSL, etc.
- In case of normal dial up/ISDN connection, the server supports automatic dialing and disconnection.
- With automatic dialing the server removes the tedium of repeated re-dialing. And with **on-demand** dialing feature it will only connect to the ISP when required.
- In case of time-based Internet connections, you save money because the server connects and disconnects from the ISP as required automatically.
- In case of bandwidth-based connections, you save money due to reduced Internet traffic.
- In case of unlimited connection plans, you save time, hence money, due to reduced Internet traffic.

Proxy Features

- With DNS and web caching, our solution improves the overall throughput of your Internet connection bandwidth.
- Domain Name Caching service speeds up Internet name lookups

Security features

- Junk content blocking, like advertising banners, cookies, etc.
- **Ban Site list**; list of sites to which access is banned.
- **Allowed list**; list of sites to which access is allowed.
- **Allowed Clients**; list of internal computers which are allowed to access Internet
- **Ban File Type list**; list of file extensions (like EXE, PIF) which can not be downloaded
- Allow only specific ports/services.
- Internet access can be regulated by individual access passwords
- Extensive logging feature allows you to monitor Internet activities.
- Keep track of web sites visited by your users.
- Keep track of downloaded files
- Keep track of bandwidth usage per user
- **Optional** scanning for viruses and other mal-ware in the downloaded files and web pages

Administrative features

- Auto configuration of nodes/computers on the LAN, if desired, including network and proxy settings.
- **ssh** based control panel for remote administration and security.

Optional

Virus/mal-ware scanning of downloaded files and web pages

Notes

- All the features mentioned above may not be available at your installation. The actual feature set will depend on your site configuration and other factors.
